

XTS Custom Pedals Precision Multi-Drive

The Precision Multi-Drive is a great sounding, versatile overdrive housed in a rugged, road-ready package. Designed to react and feel like a real tube amp, the Multi-Drive reacts to your guitar volume knob by going from clean to classic amp saturation with no other control adjustment.

The Precision Multi-Drive has more gain available than many overdrives, but maintains touch sensitivity at all settings. At low Gain settings, the Multi-Drive is also a superior clean boost. Regardless of your application, the Multi-Drive gives you a flexible voice that cuts through the mix!

Multi-Drive Controls Multiple Voicings / Multiple Tones

Fat Low-end contour control. Slim the bass response of an archtop, make your bridge pickup **Fat** or go **Fatter** for the fullest bass response possible.

Dynamics control. Fine tune your your pedals response and feel to suit your needs. Punch for an open response, **Edge** for slower attack and **Soft** for an easy to play feel.
