

XTS PREAMP

The XTS Preamp is a great all-in-one solution for those looking to get excellent overdriven, crunchy, and distorted tones from a pedal. The Preamp holds three of our most popular circuits, the **ATOMIC OVERDRIVE**, the **Precision Multi-Drive**, and the **PEGASUS BOOST**... all in one box! We have designed it to function like a two channel preamp plus a boost; add your favorite delay and you'll have a small but formidable guitar rig! Change tones with one press of the Channel Select button. No more stomp-off-then-stomp-on. Quickly change from one great tone to another!

You'll inevitably discover how it works best for you, but you may want to try setting the **Precision** for a dirty rhythm tone, the **ATOMIC** for a little more crunch and then use the **PEGASUS** as a lead boost. Given the flexibility of each pedal alone, combining them in the XTS Preamp results in a dizzying array of possibilities!

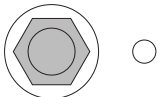

Channel Select

Choose from either the **ATOMIC** or **Precision** on the fly with one button stomp

Channel On/Off:

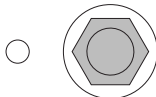

Engage or disengage the Preamp Channel you have selected with Channel Select

XTS CUSTOM PEDALS

Independent Boost

Apply Boost at anytime. Use with the **ATOMIC**, **Precision** or neither

Select one of three mid-range frequencies for the Mid control cut and boost

Fat
Slim
Fatter

Low-end contour. Go from svelte to full-bodied response.

Dynamics control. Fine tune response and feel to suit your needs

Edge
Punch
Soft

Boost before or after overdrive. Post for level increase, pre for an increase in saturation

Power Requirements:
9 VDC < 40 mA
